

nRBC-Chex for LH

The first automated nucleated red blood cell control for the Coulter® LH 750/LH 755

Automated Nucleated Red Blood Cell Control

- Whole blood, nucleated red blood cell (nRBC) control.
- Verifies accuracy and precision of the nRBC enumeration.
- First automated nRBC control for the LH 700 series instruments.
- Two levels of control cover the upper and lower ranges of the nRBC parameter.

Improve Accuracy and Efficiency

- Allows the technologist to have confidence in the instrument-reported nRBC counts.
- Eliminates the need for manual differentials.
- Cap-pierceable plastic vials can be conveniently used for open- or closed-mode testing.

STATS®

Streack offers a free interlaboratory quality control program to all qualifying customers. STATS provides convenient data entry, quick turnaround time and relevant reports. Data can be submitted by mail, fax or e-mail.

Typical nucleated red blood cell levels for nRBC-Chex for LH

Level 1.....	2.0% - 8.0%
Level 2.....	8.0% - 12.0%

Stability for nRBC-Chex for LH

Store 2° - 10° C

Closed-vial stability..... 105 days

Open-vial stability..... 14 days

NEW!
105-day
closed-vial stability!

Level	Description	Catalog #
Level 1 & 2	2 x 4.0ml	200085
Level 1 & 2	12 x 4.0ml	200086

STaK-Chex® Plus Retics

- Controls all critical parameters, including reticulocytes, measured by the LH 750/LH 755 analyzers.
- The user only needs to purchase, inventory and manage quality control records for one control.
- The extended 105-day closed-vial stability allows the customer to use one lot for three months.
- Manual reticulocyte counts can also be performed with STaK-Chex Plus Retics.

STaK-Chex® Plus Retics

Description	Catalog #
L,N, H with assay/disk.	225485

Cal-Chex

- Cal-Chex is an easier and more cost effective alternative to whole blood calibration.
- Cal-Chex is assayed on an LH 750 analyzer calibrated with whole blood using standard reference methods to ensure accurate and reliable calibration values.

Cal-Chex

Description	Catalog #
3 x 3.0 ml.	221103
