Streck introduces cellular urine control for the Iris iQ[®]

Omaha, NE — Streck Inc. introduces a new cellular urine control for the Iris iQ automated system. UA-Cellular for IQ is the only automated urine control product on the market with assayed red blood cells and white blood cells to accurately test the reporting capability of the iQ urine analyzers.

UA-Cellular for IQ contains components at two clinically significant levels providing thorough evaluation of the instrument's ability to both identify and quantify white blood cells, red blood cells, non-squamous epithelial cells and crystals.

Clear plastic squeeze bottles with flip top dispensers allow the technologist to accurately allot the exact amount of control product into their sample tubes without waste.

UA-Cellular for IQ offers an open-vial stability of 30 days and a closed-vial stability of 105 days.

STATS[®], a free interlaboratory quality control program, is offered to all UA-Cellular for IQ customers. STATS produces relevant peer group comparison reports and graphs with a quick turnaround time. Data can be submitted by mail, fax or e-mail. The reports include customer data, peer group averages and computer-generated Levey-Jennings graphs.

About Streck, Inc.

Streck is a leading independent developer and manufacturer of controls for the clinical laboratory. Over the past 30 years, Streck has developed a reputation for excellence that includes consistent, high-quality controls and responsive customer service and technical service teams.
