Streck adds instruments to A1c-Cellular[®] assay

Omaha, NE — Streck Inc., an independent developer and manufacturer of quality control products for the clinical laboratory, has added instruments to its HbA1c control assay.

Streck's A1c-Cellular, the first and only HbA1c control on the market with intact red blood cells, is now assayed on the Tosoh G8 and Beckman Coulter[®] UniCel Dx[®] 600 and 800 Synchron[®] instruments.

A1c-Cellular is appropriate for immunoassay and ionic exchange HPLC methodologies and is also assayed for the Ortho-Clinical Diagnostics VITROS[®] 5,1 FS, Arkray Menarini ADAMS[™] A1c HA-8160, Beckman Coulter Synchron, Bio-Rad[®] Variant/II[™] and D-10[™], Siemens Healthcare Diagnostics, Inc. Dimension[™], Roche Diagnostics Cobas INTEGRA[®] and the Tosoh G7/A1c 2.2 Plus.

A1c-Cellular tests the entire HbA1c procedure, including the lysing of the red blood cells. This step is omitted with other controls. Patient samples must first be lysed in order to release HbA1c for measurement. Because A1c-Cellular contains intact red blood cells, it must go through the lysing step. This important step ensures the entire system, instrument and reagents, is working properly and provides accurate patient results.

A1c-Cellular is available in 1.5 mL glass vials and 2.0 mL cap-pierceable plastic vials for HbA1c analyzers with autosampling capabilities. This product offers an open-vial stability of 30 days and a closed-vial stability of six months.

About Streck, Inc.

Streck is a leading independent developer and manufacturer of controls for the clinical laboratory. Over the past 30 years, Streck has developed a reputation for excellence that includes consistent, high-quality controls and responsive customer service and technical service teams.
